

You may need to clean the face of the meter with a wet rag. Here you will see a red triangle, this is the leak indicator. For a small leak the triangle will rotate counter clockwise very slowly, you may need to watch it for a few minutes. If it turns you have a leak. If you have a shut off valve in or under your home, turn it off. Go to the meter, if the leak indicator is turning the leak is between the meter and your residence. If the indicator is not turning, turn the valve back on and check the meter again. If the leak indicator is now turning, the leak is somewhere inside your home. Check faucets, toilets etc.

Leak Indicator

If you suspect that your toilet is leaking here are some things you can do to check it. For example:

Checking the flapper valve: Put a few drops of food coloring in the tank. After about 15 to 20 minutes check the bowl, if the flapper valve is leaking you will see food coloring in the bowl.

Checking the overflow: Sprinkle a small amount of baby powder around the overflow pipe. If the overflow pipe is leaking the powder will start to disappear.
